SUMMARY

Design engineer with an M.Des. in XR Design (IIT Jodhpur) and 2.5 years as a full-stack developer at IQVIA, where – on a team with no dedicated designer – I initiated and shipped UX improvements across a four-client enterprise pharma platform end-to-end in code. Currently at Swiggy Instamart, independently taking a validated operational concept to a production-grade tool using AI-assisted development (Claude Code, Gemini): designing workflows, data schema, and physical-environment UX, then building and shipping it. I specialise in converting research findings, published algorithms, and rough concepts into working software fast.

EXPERIENCE

•Swiggy Instamart

Jun. 2026 – Present

Human-Centred Design Intern

Bengaluru, India

- Took a validated operational concept for a new order-picking model and independently owned its full design-to-deployment cycle using AI-assisted development (Claude Code, Gemini); designed role-based workflows, interaction patterns, and the underlying data schema across four worker types and the full real-time order lifecycle.
- Designed for non-desk workers moving through a physical space – single-action screens, location-first information hierarchy, colour-coded status signalling; ran a live pilot at a darkstore, then cleaned raw log data and corrected for measurement artefacts to drive the next design iteration.

•Imersive.IO (Early-stage startup)

Jun. 2025 – Aug. 2025

Product Development Intern

Chennai, India (Remote)

- Implemented a published computer-vision method (Guan, 2009 – single-image height estimation) as a working web component from scratch: Google MediaPipe for facial-landmark detection, custom JavaScript linear algebra to solve 3D height from a single webcam frame, plus a supporting camera-calibration utility (Python, OpenCV, ChArUco board).
- Built two internal data-collection tools (Python/Streamlit, HTML/JS) generating synthetic body-measurement permutations to train a garment size-recommendation model; worked directly with the co-founder on requirements.

•IQVIA

Oct. 2021 – Jan. 2024

Associate Software Developer

Kochi, India (Hybrid)

- Full-stack developer on SIMS, a B2B supply-allocation platform for pharmaceutical clients (Angular, ASP.NET Web API, SQL Server, deployed on Azure VMs); shipped across four global clients – Amgen, Boehringer Ingelheim, Sandoz, Takeda – on a shared, per-client-customised codebase. Used GPT-assisted coding throughout, progressing from code lookups to writing full functions; also contributed to ETL pipelines and Python-based QA test automation.
- Initiated and owned the design and development of a new File Transfer module end-to-end for a newly onboarded client, from wireframe through deployment, on a team with no dedicated designer.
- Proactively identified and shipped UX improvements beyond assigned scope across 6 navigational modules and 20+ screens, including redesigning ephemeral toast notifications into a persistent status column; received the **IQVIA IMPACT Ovation Award** for this initiative.

PROJECTS

•LiquidRead | Next.js, Gemini 2.5 Flash, Figma, Supabase | AI Product Design

Jan. – Apr. 2026

- Designed and built an adaptive generative UI that renders the same research paper as a structurally different interface per reader's expertise (vocabulary, section order, density, visual components); grounded in 5 semi-structured interviews across 3 user segments.
- Developed a Research-to-Prompt methodology mapping user-research findings to traceable AI prompt variables; validated with a 26-response survey (100% of miscalibrated users preferred depth-matched content) and 7 custom visual components rendered from structured Gemini output, with full behavioural logging to Supabase.

•LucidPast | Gaussian Splatting, XR | Solo Design Sprint

2 weeks, 2025

- Solo XR design sprint building gaze-driven navigation through photo archives using Gaussian Splatting reconstructions; ran a comparative evaluation across 3 reconstruction pipelines and designed in an explicit ethical constraint against AI-fabricated content.

TECHNICAL SKILLS

- **Development:** JavaScript, TypeScript, HTML/CSS, Angular, ASP.NET (C#), SQL, Python, Next.js, Google MediaPipe, OpenCV, Streamlit, Supabase; Azure VMs/IIS; Git/GitHub, Jira, TFS
- **AI-Assisted Development & Design:** Claude Code, Gemini, ChatGPT/GPT (prompt engineering), Cursor, Figma Make, Google Antigravity (live)
- **UX & Interaction Design:** Interaction Design, Information Architecture, Wireframing, User Flows, Prototyping, Design Systems, User Research, Usability Testing, Heuristic Evaluation (Nielsen), Personas, Accessibility, Gestalt Principles
- **Design & Prototyping Tools:** Figma, Adobe Photoshop, Procreate, DaVinci Resolve, Unreal Engine 5, Unity, Blender (basic)

EDUCATION

•Indian Institute of Technology, Jodhpur

2024 – 2026

Master of Design (M.Des.), CGPA: 8.02

Jodhpur, India

•Mar Athanasius College of Engineering, Kothamangalam

2017 – 2021

Bachelor of Technology, Computer Science & Engineering, CGPA: 8.14

Kerala, India

ACHIEVEMENTS

- **IQVIA IMPACT Ovation Award:** Technical excellence and deployment ownership across SiMS for Amgen, Boehringer Ingelheim, and Takeda.

2022

- **NID DAT Mains 2024:** Graphic Design, All India Rank 27.

2024
